

# Together, we can make a difference

Keeping HVAC air filters out of landfills

Changing air filters is important for healthy air and healthy HVAC equipment.

but...

Old HVAC air filters go into the trash and end up in our landfills.

That is, until Reitmeier found a REIT Solution to our air filter waste challenge:

Last year, we recycled:

16,335

COMMERCIAL AIR FILTERS

Which would have filled:

27

GARBAGE TRUCK LOADS

Or...

44

EIGHT YARD COMMERCIAL DUMPSTERS

That weighs...

12

US TONS

By recycling air filters, we create a better tomorrow for us and our children.

Specifically, we avoid:

12

US TONS

CO<sub>2</sub>

equivalent green house gasses

And generate renewable energy:

6,600

KWH

That's enough to power:

7 HOMES FOR ONE MONTH

Reitmeier + you = a healthier world for years to come.
